عنوان فارسی مقاله:

بهترین روش برای بازکردن براکت های فلزی از نظر بیمار، کدام است؟

عنوان انگلیسی مقاله:

What is the best method for debonding metallic brackets from the patient’s perspective?
Conclusions
According to our findings, it can be concluded that:

- Patients reported lower levels of pain and discomfort when metallic brackets were removed with the lift-off debonding instrument.
- How plier and bracket removal plier generated intermediate and similar levels of patient discomfort.
- The use of a straight cutter plier caused the highest pain and discomfort scores during debonding.
- The ARI scored with all four debonding methods were not significantly different.
