4. Results

In the visualization result, relative risk of diseases of the circulatory system in near the Gyeongsangnam-do came highly, diseases of the respiratory system emerged highly in near the Gangwon-do. In addition, the relative risk was higher than the top of the area goes down. In general, in the south can be seen that the higher the risk for diseases of the respiratory system. The regulation may be necessary for the prevention of air pollution and disease.

Analysis of the disease is over, analysis of the air pollution monitoring site is in progress in the same way. After the air pollution analysis, using the Geographically Weighted Regression method will get the relationship between air pollution and mortality.
