Bio-Waste Recycling in Germany – Further Challenges
6. Ways to increase the collection of bio-waste

In Germany the biological waste treatment looks back to a successful tradition and has become firmly established on an advanced level with about 9 million tons of separately collected organic waste as part of the municipal solid waste (bio-waste in the bio bin and green waste). However, in principle an increase in collection of 2 to 4 million tons is possible. Basically two collecting systems are available. Kerbside collection system - householders are encouraged to separate targeted recyclables from their general waste and deposit this at the kerbside for regular collection. Bring systems - are also known as fixed point systems or drop-off centres, and they comprise large recycling containers in easily accessible places (household waste recycling centres or supermarkets).
