5. Conclusion

The three interlocked projects in safety competency and safety effectiveness indicators briefly described in this paper have been a milestone development in construction safety in Australia. The outcomes of this research have been endorsed by Australia’s Federal Safety Commissioner and many organisations have incorporated the outcomes into their organisational practices. For example, Sydney Water, the water supplier for metropolitan Sydney, only accepts contractor tenders from organisations that have a developed and articulated Safety Competency Framework and the Department of Transport and Main Roads in the State of Queensland matches critical roles and required Safety Management Tasks across all of its staff and contractors and trains deficiencies accordingly. More research, however, is recommended, particularly in longitudinal studies on safety effectiveness indica-tors in a variety of construction environments, to better understand how these may assist in lead indicator predictions and safety planning for the construction industry.
